

SUORITUSTASOILMOITUS

DoP 0327

fischer voima-ankkuri Highbond-Anchor FHB II (laajeneva ankkuri kiinnityksissä betoniin)

FI

1. Tuotetyypin yksilöllinen tunnistus: DoP 0327
2. Aiottu käyttötarkoitus (aiotut käyttötarkoitukset): Jälkikäteen tehtäviin kiinnityksiin halkeilevassa tai halkeilemattomassa betonissa, katso lisäys, erityisesti liitteet B1 - B11.
3. Valmistaja: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Saksa
4. Valtuutettu edustaja: –
5. Suoritusasteon pysyvyyden arvioinnissa ja varmentamisessa käytetty järjestelmä/käytetyt järjestelmät: 1
6. Eurooppalainen arviointiasiakirja: EAD 330499-01-0601
Eurooppalainen tekninen arviointi: ETA-21/0948; 2022-09-09
Teknisestä arvioinnista vastaava laitos: DIBt- Deutsches Institut für Bautechnik
Ilmoitettu laitos/ilmoitetut laitokset: 2873 TU Darmstadt
7. Ilmoitettu suoritusasteo/ilmoitetut suoritusasteot:
Mekaaninen kestävyys ja vakaus (BWR 1)
Tyypillinen kestävyys kuormitukselle (staattinen ja lähes staattinen kuormitus):
Teräksen murtokuorma: Liite C1
Ulosvetoarvon ja betonikuorman varmuuskerroin: Liitteet C2-C4
Betonimassan murtokuorma: Liite C2
Reunaetäisyys halkeamien estämiseksi kuormituksessa: Liite C2
Kestävyys: Liitteet C2-C4
Asennusmomentti: Liitteet B3, B4
Pienin reuna- ja keskinäis etäisyys: Liitteet B3, B4
Tyypillinen kestävyys leikkauskuormalle (staattinen ja näennäisstaattinen kuormitus):
Teräksen murtokuorma: Liite C1
Taivutusvoiman murtokuorma: Liite C2
Betonireunan murtokuorma: Liite C2
Siirtymät lyhyt-kestoisessa ja pitkä-kestoisessa kuormituksessa:
Siirtymät lyhyt-kestoisessa ja pitkä-kestoisessa kuormituksessa: Liitteet C5
Ominainen kestävyys ja siirtymät seismisille suoritusluokille C1 ja C2:
Kestävyys kuormitukselle, siirtymät, luokka C1: NPd
Kestävyys kuormitukselle, siirtymät, luokka C2: NPd
Leikkauskuorman kestävyys, siirtymät, luokka C1: NPd
Leikkauskuorman kestävyys, siirtymät, luokka C2: NPd
Rengasmaisen aukon kerroin: NPd
Hygieniä, terveys ja ympäristö (BWR 3)
Vaarallisten aineiden pitoisuus, päästöt ja / tai vapautuminen: NPd
8. Asiainmukainen tekninen asiakirja ja/tai tekninen erityisasiakirja: –

Edellä yksilöidyn tuotteen suoritusasteo on ilmoitettujen suoritusasteojen joukon mukainen. Tämä suoritusasteoilmoitus on asetuksen (EU) N:o 305/2011 mukaisesti annettu edellä ilmoitetun valmistajan yksinomaisella vastuulla.

Valmistajan puolesta allekirjoittanut:

Dr.-Ing. Oliver Geibig, Toimitusjohtaja Liiketoimintayksikkö & Suunnittelu
Tumlingen, 2022-09-16

Jürgen Grün, Toimitusjohtaja Kemia & Laatu

Tämä suoritusasteoilmoitus on laadittu useilla kielillä. Jos tulkinnasta syntyy erimielisyyttä, englanninkielinen versio on aina katsottava ensisijaiseksi.

Lisäys sisältää vapaaehtoisesti ilmoitettua ja täydentävää englanninkielistä tietoa, joka ylittää (kielestä riippumatta määritellyt) lakisääteiset vaatimukset.

Specific Part

1 Technical description of the product

The "fischer Highbond-Anchor FHB II for diamond drilling / extended working life" consisting of a mortar cartridge with mortar fischer FIS HB or fischer mortar capsule FHB II-P(F) and an anchor rod FHB II - A S or FHB II Inject - A S with hexagon nut and washer.

The glass capsule is set into a drilled hole in the concrete. The special formed anchor rod is driven into the glass capsule by machine with simultaneous hammering and turning. For the injection system the anchor rod is placed into a drilled hole filled with injection mortar. The load transfer is realized by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 and/or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 4, B 3 to B 4
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 2
Displacements under short-term and long-term loading	See Annex C 5
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation conditions part 1

Highbond - Anchor FHB II - A S

Pre-positioned installation

Push through installation

Pre-positioned or push through installation with subsequently injected fischer filling disc (annular gap filled with mortar)

Intended use
Specifications part 1

Annex B 1

Appendix 9 / 24

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(zinc plated steel, stainless steel or high corrosion resistant steel)
- For all other conditions according to EN1993-1-4: 2006+A1:2015 corresponding to corrosion resistance classes to Annex A 6 table 6.1.

Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Fastenings are designed in accordance with:
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Overhead installation is allowed (necessary equipment see installation instruction)

Annex B 6

Appendix 14 / 24

Installation instructions part 1; Installation with resin capsule FHB II-P or FHB II-PF

Drilling the drill hole (hammer drilling with standard drill bit)

1

Drill the hole.
Nominal drill hole diameter d_0 and drill hole depth h_0 see **table B3.1**
Cleaning of the drill hole is not necessary

Go to step 6 (Annex B 8)

Drilling and cleaning the drill hole (hammer drilling with hollow drill bit)

1

Check a suitable hollow drill (see **table B1.1**)
for correct operation of the dust extraction

2

Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.
Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.
Nominal drill hole diameter d_0 and drill hole depth h_0 see **table B3.1**

Go to step 6 (Annex B 8)

Drilling and cleaning the drill hole (wet drilling with diamond drill bit)

1

Drill the hole.
Drill hole diameter d_0 and nominal drill hole depth h_0 see **table B3.1**

Break the drill core and remove it

2

Flush the drill hole, until clear water emerges from the drill hole.

3

Blow out the drill hole twice, using oil-free compressed air ($p \geq 6$ bar)

4

Brush the drill hole twice.
Corresponding cleaning brush BS see **table B5.2**

5

Blow out the drill hole twice, using oil-free compressed air ($p \geq 6$ bar)

Go to step 6 (Annex B 8)

Annex B 7

Appendix 15 / 24

Installation instructions part 2; Installation with resin capsule FHB II-P or FHB II-PF

Installation Highbond-Anchor rod FHB II - A S

6		Insert the resin capsule FHB II-P or FHB II-PF into the drill hole by hand.
7		Pre-positioned installation: Only use Highbond-Anchor rods FHB II - A S with roof-shaped point . Drive in the Anchor rod using a hammer drill or impact drill. When reaching the setting depth mark stop the drill immediately.
		Push through installation: Only use Highbond-Anchor rods FHB II - A S with roof-shaped point . Drive in the anchor rod using a hammer drill or impact drill. When reaching the setting depth mark stop the drill immediately.
8		Pre-positioned installation: After inserting the anchor rod, excess mortar must be emerged around the anchor.
		Push through installation: After inserting the anchor rod, excess mortar must be emerged from the drill hole and must be visible in the fixture.
8a		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges)
9		Wait for the specified curing time t_{cure} see table B6.2
10		Installation torque for the hexagon nut T_{inst} see table B3.1, B4.1
Option		The gap between metal parts and fixture (annular gap) may be filled with mortar via the fischer filling disc. Compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. FIS HB, FIS SB, FIS V, FIS V Plus, FIS EM Plus). ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)

Intended use

Installation instructions part 2

Installation with resin capsule FHB II-P or FHB II-PF

Annex B 8

Appendix 16 / 24

Installation instructions part 3; Installation with injection mortar FIS HB

Drilling and cleaning the drill hole (hammer drilling with standard drill bit)

1		Drill the hole Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B3.1, B4.1	
2		Clean the drill hole. Blow out the drill hole twice. If necessary, remove standing water out of the bore hole For drill hole diameter $d_0 = 16 \text{ mm}$ blow out the hole by hand or oil-free compressed air ($\geq 6 \text{ bar}$). For drill hole diameter $d_0 = 25 \text{ mm}$ blow out the hole with oil-free compressed air ($\geq 6 \text{ bar}$). Use a compressed-air nozzle.	
3		Brush the bore hole twice. Corresponding cleaning brush BS see table B5.2	
4		Clean the drill hole. Blow out the drill hole twice. For drill hole diameter $d_0 = 16 \text{ mm}$ blow out the hole by hand or oil-free compressed air ($\geq 6 \text{ bar}$). For drill hole diameter $d_0 = 25 \text{ mm}$ blow out the hole with oil-free compressed air ($\geq 6 \text{ bar}$). Use a compressed-air nozzle.	

Go to step 5 (Annex B 10)

Drilling and cleaning the drill hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see table B1.1) for correct operation of the dust extraction	
2		Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B3.1, B4.1	

Go to step 5 (Annex B 10)

fischer Highbond-Anchor FHB II for diamond drilling / extended working life

Intended use

Installation instructions part 3
Installation with injection mortar FIS HB

Annex B 9

Appendix 17 / 24

Installation instruction part 4; Installation with injection mortar FIS HB

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6	 	Place the cartridge into the dispenser
7	 	Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Injection of the mortar

8		Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles
		For drill hole depth ≥ 170 mm use an extension tube

Go to step 9 (Annex B 11)

fischer Highbond-Anchor FHB II for diamond drilling / extended working life

Intended use

Installation instructions part 4
Installation with injection mortar

Annex B 10

Appendix 18 / 24

Installation instruction part 5; Installation with injection mortar FIS HB

Installation Highbond-Anchor rod FHB II - A S or FHB II Inject - A S

9		Pre-positioned or push through installation: Push the anchor rod down to the bottom of the hole, turning it slightly while doing so. Only use clean and oil-free metal parts.
10		Pre-positioned installation: After inserting the anchor rod, excess mortar must be emerged around the anchor.
10		Push through installation: After inserting the anchor rod, excess mortar must be emerged from the drill hole and must be visible in the fixture.
10a		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges) 
11		Wait for the specified curing time t_{cure} see table B6.1
12		Installation torque for the hexagon nut T_{inst} see table B3.1, B4.1
Option		The gap between metal parts and fixture (annular gap) may be filled with mortar via the fischer filling disc. Compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. FIS HB, FIS SB, FIS V, FIS V Plus, FIS EM Plus). ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)
